

ABSTRACT

09688780

- 5 A stackable shipping pod adapted for use on a relatively large object having a bottom surface with a plurality of bores therein, each bore for receiving a threaded member, and further having an outside perimeter. The shipping pod includes a top wall which mates to the bottom surface of the large object and has an opening through which the threaded member is extended. Also included is a
- 10 perimeter wall which extends downwardly and outwardly from the top wall, and has an exterior surface facing away from the top wall and an interior surface facing inward, such that the interior surface of the shipping pod nests proximate to the exterior surface of a second subjacent shipping pod when in a stacked orientation.
